

THE REAL CHEAT SHEET

CLAUDE CODE vs CODEX

I gave both the same brain and ran them on real client work — not benchmarks. Here's exactly which one to reach for, job by job.

Development

systems, full builds

Claude

94%

Codex

72%

CLAUDE 🏆

One rule to remember

Use **Codex** for quick creative passes (design, image models). Use **Claude Code** for systems, automation, and dev. Don't pick one — route the task to whoever's strongest.

Which one to open — by job

Reach for Claude Code

Reach for Codex

- › Multi-file builds & refactors
- › Automations: n8n, GoHighLevel, MCP
- › Wiring APIs & backend logic
- › Long tasks that need to hold context
- › Anything you'll ship to a client

- › Graphic design & image generation
- › Fast one-off creative drafts
- › Quick scripts & snippets
- › Brainstorming visual concepts
- › When you want speed over depth
